

The Quality Associates International South East Asia Pty Ltd. Lean-Six-Sigma Implementation model is based on a mentoring, and Hands-on approach. The system depends on three distinct implementation elements.

- 1) Lean Six Sigma Program Plan Development
- 2) Computer Based Training for each participant
- 3) Classroom follow-up, team leadership and project management, tracking and reporting
- 4) On-site and Off-site mentoring with actual projects
- 5) Certification through registered bodies

This approach is both cost effective and more efficient requiring less time away from the job.

Six-Sigma Implementation Model
